

VULNERABILITY ASSESSMENT

HOW CAN WE HELP YOU?

HELP!

- **Network Vulnerability Assessments**

We can assess your system for common and rare vulnerabilities, including war-dialing, weak entry points, data interception, and VPN testing.

- **Penetration Testing**

Our ethical hackers will attempt to enter your environment, a process which involves an examination of the system for any potential vulnerability that may be a product from incorrect system configuration, known and/or unknown hardware or software flaws, or operational weaknesses in process or technical countermeasures.

- **Application Security Assessments**

We can review the development lifecycle process, to include code reviews, secure application design and Web applications assessments to check for any vulnerabilities that would allow for operational vulnerabilities and inherent weaknesses.

- **Wireless Assessments**

We can examine your wireless architecture, access-point configuration (war-driving), and encryption technologies, to better protect your data.

- **Architecture Assessments**

We have expertise in network device configuration and location reviews, which allow for tighter security, reliable performance, and optimum control.

- **Host Diagnostic Reviews**

We can host end-to-end IT diagnostic reviews to secure the configuration of your standard platforms and baseline operating environments.

WE'RE ON YOUR SIDE

Compliance with regulations, proliferation of potential threats, and a growing remote and mobile workforce are challenging organizations to discover vulnerabilities and take measures to manage them.

One weak link can result in serious and expensive damage. To prevent costly security breaches, Newberry Group performs a combination of internal and external assessments, to provide an evaluation of vulnerabilities and business risks across your organization.

The Newberry Group's Cyber Security Practice provides countless assessments annually, improving the security of Fortune 500 companies, small businesses and non-profits, as well as some of the most security-conscious government agencies.
