

EMAIL SECURITY

Email is a security-attack pipeline into your company.

Today's email carries confidential reports, records, client lists, and other sensitive data, putting it at risk to all kinds of security threats, including web attacks.

Typical security products can't detect these complicated threats. To secure email, you've got to control web and data too.

If your email security doesn't guard against web attacks and data loss, it's setting you up for a downfall.

9% of data-stealing attacks occur over email

84% of all email messages are spam

85% of malicious emails contain a web link

NEWBERRY CAN HELP

Newberry understands that one of the top challenges your company faces is loss of confidential data. To help safeguard your information, we've partnered with Websense® to offer you the most comprehensive, cost effective and streamlined security solution available.

Websense® Email Security launches the next generation of email security that:

- Provides the only email solution that unifies enterprise-class email, web, and data security
- Leverages the power, simplicity, and efficiency of in-the-cloud deployment to boost productivity
- Consolidates email, web, and data security in one solution – cutting your costs and simplifying management

powered by **websense®**

ABOUT WEBSense EMAIL SECURITY

Websense[®] Email Security™ software incorporates multiple layers of real-time Web security and data security intelligence to provide leading email protection from converged email and Web 2.0 threats. It helps to manage outbound data leaks and compliance risk, and enables a consolidated security strategy with the trusted leader in Essential Information Protection™. Available as a hosted email security service or on-premise software, Websense email security protects against the convergence of Web and email threats, including data loss and regulatory violations.

FEATURES

- Superior malware protection against modern threats
- Intensive inbound email scrutiny
- Market-leading data loss prevention on outbound email
- Powerful and robust cloud/appliance hybrid managed on a single, unified content security console

WEB + DATA + EMAIL = TRITON™

Newberry's comprehensive approach to security will help your business reduce risks and potential costs of security breaches. Websense[®] TRITON™ is the first and only solution to combine industry-leading Web security, email security, and data loss prevention security technologies into one unified architecture. A unified content security solution will deliver better protection against modern threats at a lower total cost of ownership (TCO), enabling innovation without sacrificing security. Contact us for more information about the TRITON™ package.
