

WEB SECURITY

**Get the best of
the web without
it getting the
best of you.**

Facebook. YouTube. Search, search, search. You're on the web so much that it feels like home. But just around the corner, one or two clicks away, real danger lies in wait.

You've been warned.

You can't get around it: Your employees must use web apps, click links, post tweets and track tubes. You have to make sure they don't put your business at risk.

**52% of data-stealing attacks
occur over the web**

**79.9% of websites with
malicious code are legitimate
sites – like Google – that have
been compromised**

**In 2010 the overall number
of malicious websites went
up by 111.4%**

NEWBERRY CAN HELP

Newberry's Cyber Security experts know web security and understand that your organization needs to protect vital assets while capitalizing on investments. To help safeguard your information, we've partnered with Websense® to offer you the most comprehensive, cost effective and streamlined security solution available.

**Websense® Web Security solutions
safeguard you with:**

- Enterprise-class data loss prevention (DLP) right in the web security gateway
- Real-time monitoring of social content 24/7 for the best possible protection
- Mirrored redundancy in the cloud for automatic backup
- A single, unified, powerful framework that allows you to grow, with integrated web, email, and data security for the best protection at the lowest total cost of ownership

powered by **websense®**

ABOUT WEBSense[®] WEB SECURITY

Websense[®] Web Security allows organizations to secure Web traffic effectively while still enabling the latest in Web 2.0 tools and applications. Through a realtime content classification engine, Websense Web Security analyzes Web traffic on the fly, instantly categorizing new sites and dynamic content, proactively discovering security risks, and blocking dangerous malware.

FEATURES

- Apply policy to social interactive web content
- Protects against advanced zero-day threats
- Prevents data loss and establishes compliance controls
- Manages the use of network applications and protocols
- Gain visibility into encrypted SSL traffic
- Consolidate multiple products and deployment platforms with a unified content security solution

WEB + DATA + EMAIL = TRITON™

Newberry's comprehensive approach to security will help your business reduce risks and potential costs of security breaches. Websense[®] TRITON™ is the first and only solution to combine industry-leading Web security, email security, and data loss prevention security technologies into one unified architecture. A unified content security solution will deliver better protection against modern threats at a lower total cost of ownership (TCO), enabling innovation without sacrificing security. Contact us for more information about the TRITON™ package.
